

Science Rules!

Ever wonder why the sky is blue?
What makes your ears pop at a certain altitudes?
Curious where rocks and mountains get their shape?
Or how come your cotton candy always disintegrates?

There's a bunch of different places you can look
But the answers all come in your science book
Where you can learn about everything under the sun
And the Jay the Science dude makes it lots of fun! Yeah...

(CHORUS)

Geology is rockin'!
Chemistry's a blast!
Biology just grows on you!
Archeology takes you back!
Astronomy is far out!
Physics is just plain cool!
Any way you break it down
Science totally rules!

Just like sonar devices on a submarine
Echolocation uses sound to see
Laws of motion are tools that are meant to explain
What makes objects act and react a certain way

You got natural, physical and behavioral
And theres even social and political
There's an element of science in everything we do
And so many different ways to put science to use. Yeah...

(CHORUS)

You've got ecosystems, organisms, fossils, cells and genes
You've got experiments and environments, principals and theories
You've got molecules and variables, observations and hypothesis
You've got balance and equilibrium, and don't forget relativity

No matter how you break it down, science totally rules!
